User Guide

Clinisept+ Procedure Aftercare

Clinisept+ Procedure Aftercare has been recommended by your clinician to care for your skin. Please read this leaflet carefully to ensure that you use it correctly to enable it to deliver the best possible results.

Clinisept+ Procedure Aftercare cleanses, calms and cares

for skin. It contains the latest hypochlorous technology to provide professional levels of antimicrobial protection without stinging or irritation. It provides optimal conditions for skin recovery:

- Cleansing antimicrobial
- Skin neutral pH
- Non-irritant
- Non-cytotoxic
- Dermatologically tested
- No Alcohol

Clinisept+ Procedure Aftercare is suitable for use on normal and sensitive skin.

Using Clinisept+ Procedure Aftercare:

Always wash your hands before touching the skin.

Apply **Clinisept+ Procedure Aftercare** by spraying directly onto the intended area, or by wetting a gauze or cleansing pad with Clinisept+ and then gently wiping over the area. Ensure the area is **thoroughly** wetted at each application.

Once applied, **Clinisept+ Procedure Aftercare** leaves no residue on the skin and can be left to dry naturally. Do not dry or touch the skin after application unless with clean hands or a gauze.

Clinisept+ Procedure Aftercare should be applied 2-3 times a day, or as necessary, to keep the skin cleansed and calm. It is not intended or suitable for use as a make-up remover.

Clinisept+ Procedure Aftercare provides a cooling and calming sensation and is very effective in reducing redness. For maximum care of recovering or irritated skin, thoroughly soak a gauze or cleansing pad with Clinisept+ and leave it placed on the affected area for five to ten minutes. Repeat as necessary. If applying Clinisept+ around the eyes, close them before spraying or wiping onto eyelids.
