

Using Clinisept+ Podiatry on the feet

Apply Clinisept+ Podiatry by spraying directly onto the intended area or by wetting a gauze or cleansing pad with Clinisept+ and then gently wiping over the area. Ensure the area is thoroughly wetted at each application.

Once applied, Clinisept+ leaves no residue on the skin and can be left to dry naturally.

Or, if necessary, use a clean gauze or dressing pad to absorb any excess.

To keep irritated or recovering skin cleansed and calm, Clinisept+ Podiatry should be applied 2-3 times a day as required, or as per instructed by your podiatrist.

For maximum care of recovering or irritated skin, spray regularly with Clinisept+ Podiatry or soak a gauze or pad and leave it to soak on the affected area for five to ten minutes. Repeat as necessary.

Clinisept+ Podiatry

Clinisept+ is manufactured in the UK under ISO 13485 and ISO 22716 (GMP) accreditation.

The next generation of skin cleansing for podiatry treatments

Clinisept+ Podiatry

A revolution in Podiatry

Clinisept+ Podiatry re-writes the rule books of podiatric care: it is the only skin cleansing chemistry that combines highly effective antimicrobial cleaning with absolute skin compatibility.

- Highly effective antimicrobial
- Dermatologically tested
- Non irritant, non sensitising, non-cytotoxic and hypoallergenic
- Skin neutral pH
- Deodorising
- Contains no alcohol or chlorhexidine

Because Clinisept+ Podiatry is non sensitising, it can be used before, during and after podiatric procedures, where it provides the ideal conditions for rapid skin recovery – without stinging or irritation.

Clinisept+ Technology

What makes Clinisept+ Podiatry unique?

Most skin cleansers use harsh chemicals to clean the skin. Even at low concentrations these are still toxic and can actually inhibit skin cell regeneration.

Clinisept+ takes a completely different approach: It contains a pure hypochlorous solution which replicates the chemistry of the human immune system and which contains 99% water. This enables it to provide highly effective skin cleaning without causing any toxicity or leaving any residue or chemical burden.

Clinisept+ Podiatry soothes and calms

Because of its skin compatibility Clinisept+ reduces the appearance of redness and swelling and forms the optimum environment for healthy skin to flourish.

For use in the clinic, and at home by patients

In addition to providing better hygiene and skin compatibility in the clinic, Clinisept+ Podiatry enables patients to maintain optimum levels of foot hygiene at home, either following a procedure to aid recovery, or as part of a daily hygiene regime.

This is especially beneficial where patients foot health would benefit from better cleanliness and microbial control. It is suitable for use by those prone to athlete's foot, eczema, psoriasis, dermatitis and by diabetics.

100ml and 250ml for patient use at home.

Clinisept+ is used and endorsed by leading UK podiatrists

“We use Clinisept+ in our podiatry clinic and find it has significant advantages over traditional skin cleansing chemistries. It is a highly effective skin cleaner and provides excellent antimicrobial protection, but does so without causing irritation to the skin. It is also suitable for use by patients which enables them to maintain high levels of foot hygiene at home”.
